

Learn on a Budget

Free and low-cost ways to learn Excel, Python, and analytics

1. Your library card is a learning pass

Many public library systems offer LinkedIn Learning free to cardholders. That includes my full course catalog on Excel, Power Query, Python, and analytics. Check with your local library, then follow the setup guide:

LinkedIn Learning via your library

stringfestanalytics.com/how-to-take-my-linkedin-learning-courses-for-free-with-your-library-card/

O'Reilly books via your library

stringfestanalytics.com/how-to-access-my-oreilly-content-for-free-through-your-public-library/

2. Free and low-cost resources on Gumroad

Templates, guides, and self-paced resources. Some are free, and the rest are priced so cost is not the obstacle.

3. Free live webinars

I regularly run open webinars and demo days that teach real workflows. Follow the Eventbrite page to get notified when new sessions go up.

4. No money? Your support still counts

Sharing a post, leaving a comment, or writing a LinkedIn recommendation is worth real money to a solo business. And the best free move for your own career: teach what you learn by posting your own content. Send it to me for feedback, and I may share it with my audience.
