STRINGFEST ANALYTICS

Copilot Code training for finance teams

Live, hands-on workshops with George Mount

Turn a finance idea into a small working prototype - and develop the judgment to check, refine, and decide how to use what AI builds.

Built for finance, accounting, and FP&A teams

For professionals comfortable with spreadsheets who want to explore AI-assisted building. Introductory sessions require no coding experience. Examples are scoped to your team's work and available Copilot features.

What your team will practice

Frame the project	Define the users, inputs, limits, and a checkable result.
Build and refine	Plan a small version, preview it, and make focused changes.
Test the logic	Check calculations, assumptions, missing data, and edge cases.
Plan the next step	Agree on review, ownership, and a useful internal pilot.

Finance projects we can explore

Variance explorer / Scenario calculator / Month-end close tracker

Exercises use sample or agreed practice data. Workshop prototypes need further review before use in live finance processes.

Choose the format that fits

Focused workshop for one workflow. **Full training day** for deeper practice. **Multi-session program** to build shared habits over time.

Live online or onsite by arrangement. Scope, duration, group size, and fee agreed before booking.
